(Gantry Only)

x4 Truss

x1 Handrails

x6 Leg Base

x1 Number Plate

x4 Leg top

x2 Truss mount

x2 Legs and x1 ladders

Dear Customer

Thank you for your purchase and interest in our OO Gauge 2 Track Gantry kit. It has been designed to fit together with glue. Covers up to 2 tracks.

Tools required: glue.

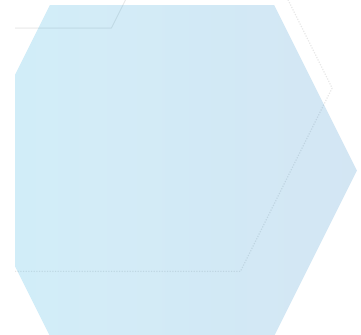

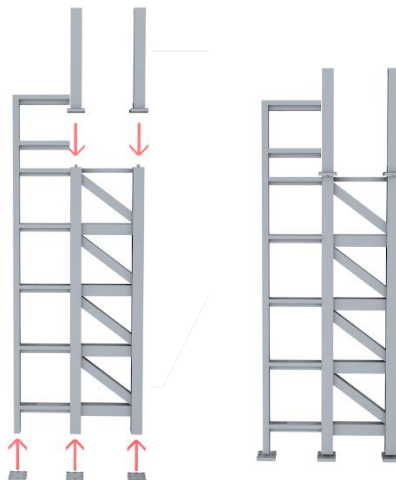

ASSEMBLY INSTRUCTIONS.

1) Fold each rail up: use a ruler along the folding seems to assist.

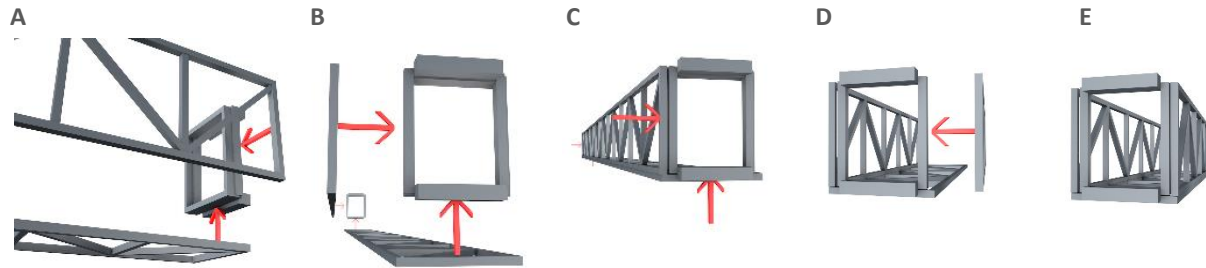

2) Glue the parts together as shown on the right. Make sure the smooth backs of the legs are facing inwards.

(Parts needed: Legs, leg base and leg top)

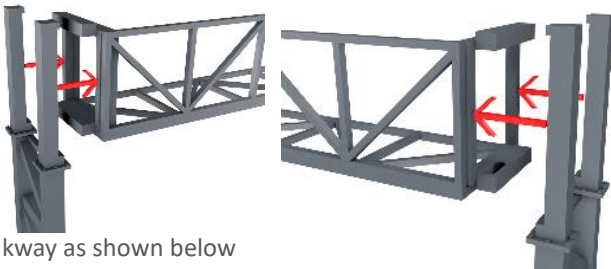

3). Prepare truss sections.

Glue truss parts to Truss mounts as shown. Add legs as shown. Keep orientation as shown in image D and E so the open part of the gantry is on top. You can add this truss part later if you intend to fit lights at this stage. Use wire run in the legs.

4). Attach gantry to legs as shown below:

Note how the gantry mounting slots fit between those top poles.

4) add walkway as shown below

5) glue final part of the gantry truss into place as shown in A.

6) Lastly glue the ladders as shown above in image B. Add the number plate to one of the legs as seen in image C. You can also add Overhead line equipment to any track that requires it. Once complete wire this up to your chosen controller. Painting can be done at any stage.
